PageAssist

Make Your Website Accessible for a Wider Audience

PageAssist, an add-on to the Monsido web governance platform, is a personalization toolbar that helps display your website in a way that is more usable and visually accessible. PageAssist removes some accessibility issues and helps you ensure an equal experience for all your visitors.

Many organizations have websites that are visually inaccessible for many users with disabilities. Failure to address these barriers can be due to a lack of technical understanding or because organizations do not want to change the look and feel of their homepage.

By making your website's content more visually accessible for all, including those with disabilities, you can see your audience expand and tap into a global market with an estimated value of $645 billion.

Remove Some Visual Accessibility Errors

Ensure an equal and effortless experience for all your visitors. The PageAssist tool is added to your website as an overlay, allowing visitors to customize their visual experience based on their own unique requirements. PageAssist removes style sheets, instantly enhancing readability for many users. Visitors can change colors, fonts, font size, and formatting, making it easier for them to consume your website's content.

About Monsido

Monsido is a fast-growing software company founded in 2014 that provides a one-stop web governance solution designed to give website visitors a superior browsing experience. Our time-saving auditing tool provides accurate and insightful information that helps organizations work with confidence to identify accessibility and quality assurance issues. This enables them to optimize their online presence and ensure compliance with legal requirements. Monsido has offices in the United States, Australia, and Denmark. For more information, visit *www.monsido.com*

Give Your Visitors the Ability to Change Your Website's Font

Users can change your website's font into OpenDyslexic 3, a typeface specifically designed to increase readability for readers with dyslexia. Letters in this typeface have heavy weighted bottoms to indicate direction. Users can quickly figure out which part of the letter is down, which aids in recognizing the correct letter. This helps keep users' brains from rotating them around while also reinforcing the line of text.

Make Navigating Your Website Easier

Simplify your website by parsing on-page navigation, allowing your visitors to see everything from one simple view. Users will be able to change the parsed website theme, benefiting those with issues such as color blindness and other visual impairments by allowing them to change the color scheme, as well as the font and font size.

Personalized View   Site Menu   Keyboard Navigation   Information

Give Your Visitors More Control

Each tool can be toggled individually or in concert with others, giving users full control over their digital experience.

Keep Your Organization's Branding

Add your own company's branding to the overlay, by customizing the styles. Choose the background color of the overlay button and where it placed on the website - left or right.

Support & Installation

Setup is achieved by quickly and simply by adding a small JavaScript on your homepage. And don't worry, it will not affect the speed of your page.

Setting up the parsing can be done easily inside the Monsido app.

While it is possible to show forms, we recommend hiding them. When JavaScript and styles are removed, this can break the forms so they cannot be used.

It is possible, however, to ask PageAssist to hide the form and create a link to the form on your non-parsed page. This ensures that visitors to your website can still use the form and that you don't miss any user contacts.
