PageCorrect

Fix Quality Assurance and Web Accessibility Issues Quickly and Easily

PageCorrect™ is a revolutionary new tool that allows you to instantly address quality assurance and accessibility issues directly, without the need to log onto a content management system (CMS).

Ensuring that your website is free of quality assurance and accessibility errors can be an extremely time-consuming and headache-inducing task. While many solutions exist that allow organizations to identify errors, they all require you to log-in to a CMS to actually address them. PageCorrect gives you the unique ability to fix most website issues, like broken links and accessibility issues, directly from the Monsido web governance platform itself and have these changes reflected on your website.

Key Features

Correct Misspellings
Quickly and easily identify and correct misspellings across your entire website.

Fix Broken Links
Effortlessly rid your site of broken links that can harm your users' overall experience.

Repair Broken Images
Avoid causing your users frustration by locating and fixing any broken images.

Ensure Alt Attributes are Not Missing or Incorrectly Used
Instantly address missing or incorrectly applied alt attributes that can negatively impact your site's level of accessibility compliance.

Customize Rules for Words
Identify specific spellings, words, or phrases used across your website and update them in bulk at the touch of a button.

Identify and Instantly Address Non-ADA Compliant Elements
Find and remove non-ADA compliant elements, such as <i> and <b> elements, and improve your level of accessibility.

Support & Installation
Setup is achieved quickly and easily by adding a small JavaScript on your homepage.

Effortlessly Maintain Your Website

Optimizing your website for quality assurance and accessibility isn't a one-off project but rather, an ongoing process. By removing the CMS element with PageCorrect, you'll have a clear view of where issues lie on your site and be able to resolve them immediately on the platform. Additionally, the Monsido interface enables non-technical users to update your site easily without any coding knowledge.

Identify and Repair Errors Immediately

Make quick and targeted corrections to quality assurance errors. Errors like broken links and misspellings can be detrimental to your site's search engine ranking and overall credibility, while accessibility issues can create a bad user experience for your visitors. You can use PageCorrect to address these issues as you find them, maintaining the quality and compliance of your site.
