# ScannerVision™ VI

## Capture handwritten data with Virtual Ink

ScannerVision™ Virtual Ink is revolutionary new method of capturing, processing and distributing handwritten data. ScannerVision™ VI software works with your existing laser printer or multifunction device to enable you to instantly receive digital copies of documents seconds after you write on them with the digital pen!

The unique microscopic pattern of dots to the document which enables handwriting to be recorded with a digital pen. Simply dock the pen in its cradle after writing, and you'll be presented with a crystal clear PDF or TIFF copy of the document. To get started with ScannerVision™ Virtual Ink, simply print your paper form, from any application, to the special ScannerVision™ VI printer driver. A unique pattern of micro-dots is added to the document

as it is printed, and an image of the document is automatically stored on your computer for future reference.

Next, you write with a digital pen onto the document, just as you normally would. ScannerVision™ VI's special pattern of dots enables the digital pen to automatically sense its location and record your handwriting in its memory.

When the pen is docked in its cradle, the recorded ink is downloaded and matched with the image of the original document – instantly creating an exact copy of the handwritten document in your desired electronic format.

# Portable Document Capture

Writes like a pen, captures like a scanner

Getting handwritten data into any software application is now a snap. The digital pen can store enough documents to keep you going all day long. And when you need access to the electronic information simply dock the pen in the cradle and transfer the data to a ScannerVision™ Server, which can automatically extract, process and route your business critical information.

## ScannerVision™ Virtual Ink (VI) Suite

- ScannerVision™ VI software works with your Laser printer or multifunction device and your existing software and lets you instantly receive digital copies of documents seconds after you write on them with a digital pen!
- Just print as you normally would, use the ScannerVision™ VI printer driver and a compatible printing device
- The driver adds a unique microscopic pattern of dots to the document which enables handwriting to be recorded with a digital pen
- Simply dock the pen in its cradle after writing, and you'll be presented with a crystal clear electronic document

## Paper has never been so powerful

- Customisable commands allow you to control what automatically happens to the document once it has been written upon
- Now you can email handwritten documents instead of faxing or mailing them overnight
- You can automatically retain digital copies of signed documents
- You can eliminate scanning and go directly into document management systems
- You can quit worrying about ever losing a paper document again
- You can spend dramatically less time getting handwritten data into your existing information

## System Requirements

- IBM Compatible PC
- Operating systems:  
Windows XP/Vista/Windows 7
- Pentium III processor: 700 MHz+
- 512MB of memory (1GB recommended)
- 500MB of available hard drive space
- Available USB port  
(to attach digital pen cradle)
- Internet connection
- Print device with 600dpi output, or a multiple thereof (1200,1800, 2400 etc.)
- PostScript 3 (PS3) printer driver
- GDI (or host-based) printer driver
